WHO WE ARE?

Our Service

high-quality COMPOUNDING SERVICE

What is Compounding?

Pharmacy compounding is the art and science of preparing customized medications for specific patients with needs that can't be met by commercially available drugs. We, as a service company for compounding, work closely with hospitals and clinics to fill a gap in health care through customized solutions for specific patient needs. Our team of pharmacists and experts in the field can assist you to formulate and to develop the nutritional supplements that best fit your medical practice in order to provide another viable and beneficial income system.

OUR PRODUCTS

Customizable to Your Needs

certified SUPPLEMENT PRODUCTS

What We Offer

Our wide-ranging, up-to-date and certified supplements include: amino acids, antioxidants, bone and joint support, brain support, fiber and digestive support, herbal and phyto extracts, immune support, minerals, vitamins, weight and glucose management as well as imported dispensed products.

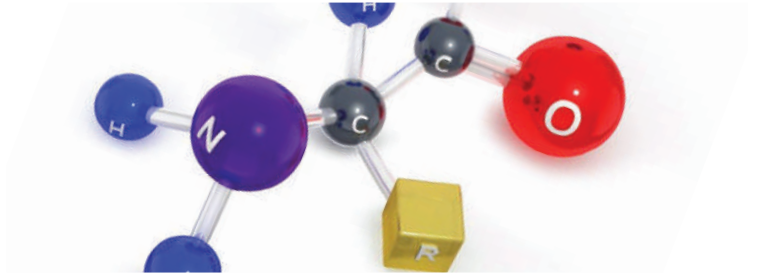

customizable SUPPLEMENT BLENDS

Compounding Formulas

Creating customized supplement blends can help patients because the dosage is catered specifically for them. It will also help reduce the patient's capsule intake and make it easier for them to handle their medication on a daily basis.

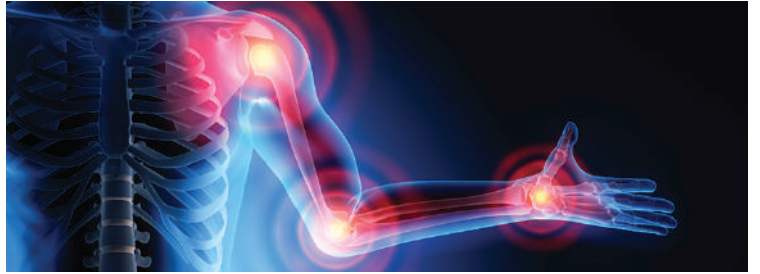

AMINO ACIDS

Amino acids, often referred to as the building blocks of proteins, are compounds that play many critical roles in your body. They're needed for vital processes like the building of proteins and synthesis of hormones and neurotransmitters. Some may also be taken in supplement form for a natural way to boost athletic performance or improve mood.

BONE & JOINT SUPPORT

Your bones give your body shape, produce red blood cells, store crucial minerals, protect vital organs, and enable the movement of work and play. Over the course of your life, your body will constantly break down and regenerate your bone tissue. Understanding and supporting this process is important for maintaining a high quality of life as you age.

ENERGY BOOSTER

Diet and lifestyle go a long way in terms of fighting fatigue, but despite our best efforts to exercise daily, eat right, and sleep well, our busy lifestyles and modern society demand a lot of us daily, energetically, and deplete our bodies on a cellular level. While a perfectly balanced diet and lifestyle helps to combat daily stresses of the hustle and bustle, we are only human and are likely to need a little extra boost. Supplements will help you give that extra boost.

HAIR SUPPORT

Good nutrition is not only important total body healthy but also in order for healthy hair to grow. A healthy scalp, which is the ideal environment for healthy hair to thrive, is at its very best when it is properly nourished. Unfortunately, it is very hard to get the necessary vitamins to ensure that your hair is in optimal condition through a regular diet. If you aren't getting the recommended daily dose of those vital nutrients, you should consider adding a vitamin that will aid you in reaching your hair goals.

IMMUNE SUPPORT

The wear-and-tear of daily living puts an enormous burden on the immune system. Add to that toxins in the environment, infectious diseases, and chronic stress, and it's likely that your immune system could use some support. Whether you're looking to shore up your defenses during cold and flu season, or create long-term immune support to help protect against cancer and other diseases, supplements can help.

SKIN SUPPORT

'Even the healthiest diet cannot provide the body with everything it needs. Supplements ensure optimal nutrition by topping you up with the essential vitamins and minerals your body needs.'

- Dr. Howard Murad.

World-Renowned, Board Certified Dermatologist

WEIGHT & GLUCOSE MANAGEMENT

From difficulty concentrating to irritability, symptoms of unstable blood sugar are far from pleasant. When insulin levels are too high, it prevents your body from burning fat. A good balance between a healthy diet and taking supplements will help you maintain healthy blood sugar levels and also help with weight loss.

ANTIOXIDANT

Antioxidants are man-made or natural substances that may prevent or delay some types of cell damage. Diets high in vegetables and fruits, which are good sources of antioxidants, have been found to be healthy; however, research has not shown antioxidant supplements to be beneficial in preventing diseases.

BRAIN SUPPORT

Just as athletes take supplements to enhance their physical performance, some people take supplements to enhance brain performance. Herbs or nutrients related to boosting brain performance can help enhance clarity of thinking, alertness, focus, concentration, memory, and even mood.

FIBER & DIGESTIVE SUPPORT

Fiber is important for healthy digestion, and high fiber diets are also linked to improved heart health. Fiber supplements allow people to increase the amount of fiber in their diets if they aren't eating or getting enough from food and also help with short-term relief from constipation and bowel irregularity. They are important in weight management because it helps people feel fuller longer.

HERBAL & PHYTO EXTRACT

Herbal supplements are a type of dietary supplement that contains herbs plant or part of a plant used for its flavor, scent, or potential therapeutic properties. Includes flowers, leaves, bark, fruit, seeds, stems, and roots, either singly or in mixtures. An herb (also called a botanical) is a plant or plant part used for its scent, flavor, and/or therapeutic properties.

MINERALS

Vitamins and minerals boost the immune system, support normal growth and development, and help cells and organs do their jobs. Although you get vitamins and minerals from the foods you eat every day, some foods have more vitamins and minerals than others. A vitamin or mineral supplement provides a variety of nutrients that are also found in food but you may not be consuming enough of.

VITAMINS

Vitamins and minerals boost the immune system, support normal growth and development, and help cells and organs do their jobs. Although you get vitamins and minerals from the foods you eat every day, some foods have more vitamins and minerals than others. A vitamin or mineral supplement provides a variety of nutrients that are also found in food but you may not be consuming enough of.

HORMONE CREAM

Hormones are special chemicals made by parts of the body called glands. They are messengers that tell other parts of the body how and when to work. Hormones control almost all tasks in the body. These include sex and brain function, growth and the breakdown of food. As men and women age, the levels of some key hormones in the body go down. Hormone creams are used as treatment for men and women whose own hormones are low or out of balance.

PACKAGING SAMPLES
